Internship Report

Data Science & Analytics

FUTURE INTERNS · FELLOWSHIP PROGRAM · INTERN REPORT

Submitted by	Satyam
Course	Bachelor of Computer Applications (BCA), Sem V, Section 3
Admission Number	24SCSE1040335
Institute	Galgotias University
Internship Provider	Future Interns — Data Science & Analytics
Offer Letter Ref. No. (CIN)	FIT/OCT26/DS24259
Internship Duration	27/10/2026 to 27/11/2026 (4 weeks)
Mode	Virtual
Submitted to	Mr. Akhilesh Kumar Singh, Assistant Professor (Faculty ID: GUSCSE202332402)
Academic Year	3rd
Report status	Internship ongoing; covers work from 27/10/2026

Declaration and Acknowledgement

Declaration

I, Satyam, a student of BCA (Semester V) at Galgotias University, hereby declare that this report is a record of the work carried out by me during the Future Interns Data Science & Analytics Internship (27/10/2026 to 27/11/2026), and that it has been prepared on the basis of my own learning and experience during the programme.

Signature: **Date: 30/10/2026**

Acknowledgement

I express my sincere gratitude to Future Interns for selecting me for the Data Science & Analytics Internship and for providing a structured, task-based programme. I am thankful to Mr. Akhilesh Kumar Singh, Assistant Professor, Galgotias University, for his guidance and for supporting the internship as part of our Semester V course. I am also grateful to my family and friends for their continuous support.

Abstract

This interim report summarises my work in the one-month Future Interns Data Science & Analytics Internship, which began on 27/10/2026 and runs until 27/11/2026. The programme is self-directed and task-based, and requires every task to be documented in a public GitHub repository.

The report covers Task 1, Business Sales Performance Analytics, for which I used a Mobile Sales Dashboard built in Microsoft Power BI. The dashboard covers 769.2M in total sales, 19,150 units and 3,835 transactions across five brands, and the analysis turns it into insights and recommendations.

The portal submission and final steps are planned and will be added once completed.

1. Introduction

Data analytics turns raw business data into decisions: which products sell, when customers buy and how they pay. As a BCA student, I wanted hands-on, industry-style exposure beyond the classroom, and this internship, a mandatory course in Semester V, gives me that through real business-style tasks.

The internship is conducted virtually by Future Interns from 27/10/2026 to 27/11/2026. Interns choose from tasks in Business Sales Performance, Customer Retention & Churn, and Marketing Funnel analysis, and submit their work through a GitHub repository named FUTURE_DS_01 (task number 01).

2. About the Organisation

Future Interns runs online internship and fellowship programmes in areas such as Data Science & Analytics. Selected candidates receive an official offer letter with a CIN ID, a task list with deliverables and evaluation criteria, and, on successful completion, an Internship Completion Certificate and a Letter of Recommendation.

Contact: contact@futureinterns.com · futureinterns.com · linkedin.com/company/future-interns

3. Objectives of the Internship

- To analyse business sales data and identify revenue trends, top-selling products, high-value categories and regional performance.
- To clean, model and visualise data using tools such as Power BI, Excel and Python.
- To practise KPI analysis and turn findings into clear, actionable recommendations.
- To document work professionally in a public GitHub repository.
- To build a verifiable portfolio and a professional LinkedIn presence.

4. Internship Structure and Evaluation

- The programme is self-directed and self-paced; no formal training sessions are provided.
- Work is valid only within the dates in the offer letter (27/10/2026 to 27/11/2026).
- Each task is submitted as a public GitHub repository named FUTURE_DS_01, then through the official Task Submission Portal using the CIN ID: FIT/OCT26/DS24259 (portal window for my CIN: 11/11/2026 to 12/11/2026).
- A minimum of 2 completed tasks is required for the Internship Completion Certificate, and 3 for a Letter of Recommendation, which is issued based on performance.
- Interns share the offer letter on LinkedIn, tag Future Interns and use #futureinterns.

5. Week-wise Report

Week	Focus	Status
Week 1 (27/10 — 02/11/2026)	Onboarding, task review, Task 1: Business Sales Performance Analytics, GitHub repository FUTURE_DS_01	Completed
Weeks 2–3 (03/11 — 16/11/2026)	Submission of the project on the Future Interns Task Submission Portal (window for my CIN: 11/11 — 12/11)	In progress
Week 4 (17/11 — 27/11/2026)	Repository clean-up, LinkedIn updates, final report update; request for the Completion Certificate and Letter of Recommendation	Planned

Week 1 — Work done so far

- Received the offer letter and selection email (CIN FIT/OCT26/DS24259) and studied the task list, guidelines and GitHub naming rules.
- Selected Task 1, Business Sales Performance Analytics, and used the Mobile Sales Dashboard (Power BI) as the project for it.
- Analysed the dashboard to identify revenue trends, brand and model performance, payment behaviour and day-wise and month-wise patterns.
- Wrote the insights and recommendations (Section 7) and prepared the GitHub repository FUTURE_DS_01 with the Power BI file, dashboard screenshot and README.

6. Tools and Technologies Used

Category	Tool	Used for
BI and dashboards	Microsoft Power BI Desktop	Data model, visuals, slicers, KPI cards
Calculations	DAX measures	Total Sales, Total Quantity, Transactions, Average
Version control	Git and GitHub	Public repository FUTURE_DS_01
Documentation	Markdown (README)	Project description and insights
Planned	Excel, Python (Pandas)	Possible extensions of the sales analysis

7. Task 1 Project: Mobile Sales Dashboard

7.1 Problem Statement

A mobile retailer needs to know where revenue comes from: which brands and models sell best, which cities, months and weekdays perform well, and how customers pay. The task was to analyse this sales data and present revenue trends, top products and regional performance with clear recommendations.

7.2 Dashboard Design

- Four KPI cards: Total Sales, Total Quantity, Transactions and Average (average selling price per unit).
- Slicers for Mobile Model, Payment Method, Brand and Day Name, plus month buttons from January to December.
- Visuals: Total Sales by City (map), Total Quantity by Month (line), Customer Ratings (funnel), Transactions by Payment Method (pie), Brand summary (table), Total Sales by Mobile Model (bar) and Total Sales by Day Name (area).

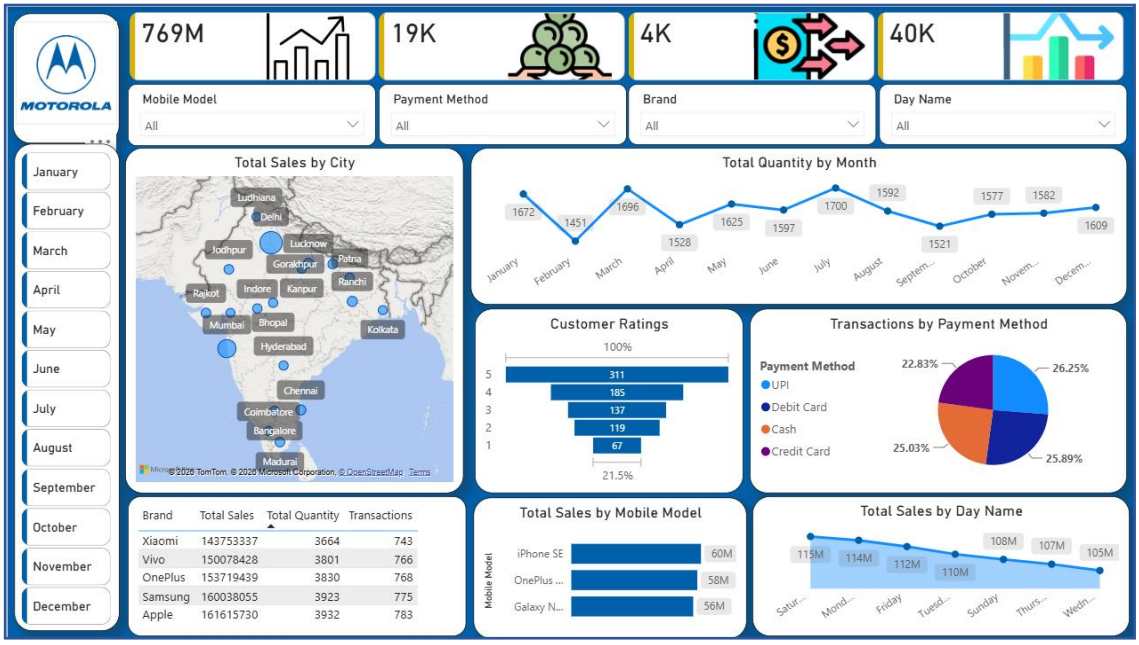

Figure 1: Mobile Sales Dashboard (Power BI)

7.3 Key Figures

Brand	Total Sales	Share	Quantity	Transactions	Sales / unit
Apple	161,615,730	21.0%	3,932	783	41,103
Samsung	160,038,055	20.8%	3,923	775	40,795
OnePlus	153,719,439	20.0%	3,830	768	40,136
Vivo	150,078,428	19.5%	3,801	766	39,484
Xiaomi	143,753,337	18.7%	3,664	743	39,234
Total	**769,204,989**	**100%**	**19,150**	**3,835**	**40,167**

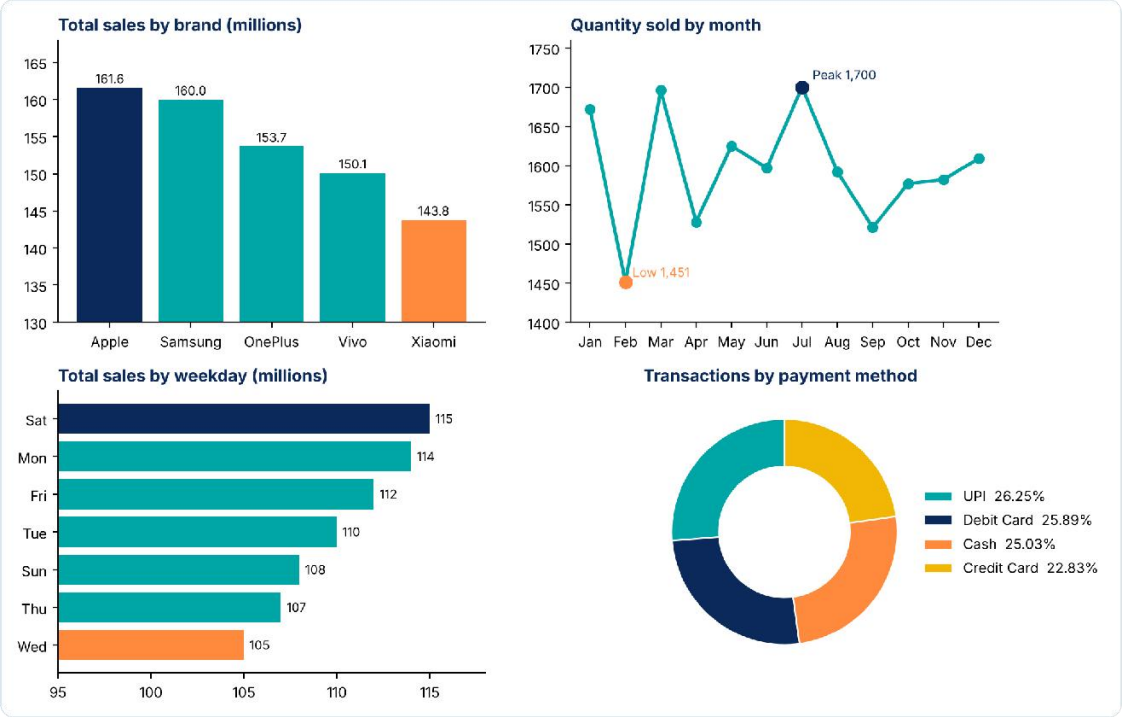

Figure 2: Sales performance at a glance (values from the dashboard)

7.4 Insights

1. **Balanced market.** Apple leads with 21.0% of sales and Xiaomi trails with 18.7%; the gap between first and last is 12.4%, so no brand dominates.
2. **Premium edge.** Apple earns the highest sales per unit (41,103) and Xiaomi the lowest (39,234).
3. **Top models.** iPhone SE leads sales by model at 60M, followed by OnePlus at 58M and Galaxy N at 56M.
4. **Seasonality.** Monthly quantity peaks in July (1,700) and March (1,696). February is lowest at 1,451, about 9% below the monthly average of 1,596; September is also soft at 1,521.
5. **Weekday pattern.** Saturday is the strongest day (115M) and Wednesday the weakest (105M), a gap of about 9.5%. Monday (114M) and Friday (112M) also perform well.
6. **Payments.** UPI 26.25%, debit card 25.89%, cash 25.03% and credit card 22.83% of transactions; digital methods together account for about 75%.

7.5 Recommendations

1. Schedule promotions and extra staff on Saturdays and Mondays, and run midweek offers on Wednesday and Thursday to lift the weakest days.
2. Build stock for March and July, and use targeted discounts or festival bundles to lift February and September.
3. Offer no-cost EMI or card offers on premium models to raise credit card usage (lowest at 22.83%), and UPI cashback to grow the largest payment channel.
4. Protect the Apple and Samsung premium lines, and give Xiaomi value bundles or accessory offers, since it has the lowest revenue share and price per unit.

5. Next version of the dashboard: add a year-on-year comparison and profit margin data, if available, so recommendations can be ranked by profit and not only revenue.

7.6 Key Learnings

- A dashboard is only useful when its numbers are turned into a decision.
- Slicers and cross-filtering let one page answer many business questions.
- Clear documentation in GitHub makes the work easy for others to verify.

8. Skills Acquired

Technical: Power BI dashboard design, DAX measures, KPI analysis, data visualisation, insight generation, Git and GitHub, Markdown documentation.

Professional: self-directed learning, time management, business thinking, report writing, presenting insights to non-technical readers.

9. Challenges Faced and How I Handled Them

Challenge	How I handled it
Self-directed programme with no formal training	Studied the task document and official documentation, and worked step by step
Turning charts into actionable recommendations	Compared each visual with the KPIs and wrote one recommendation per insight
Documenting work professionally on GitHub	Followed the required repository naming and added a README with screenshots
Balancing the internship with university coursework	Planned tasks week by week

10. Applications and Career Relevance

The skills apply directly to roles such as Data Analyst, Business Intelligence Developer and Sales Analyst. Sales dashboards like this one support stock planning, promotion timing and payment-offer decisions in retail, and the internship complements my BCA coursework in programming and databases.

11. Conclusion

In the first days of the Future Interns Data Science & Analytics Internship, I have completed the onboarding, studied the task framework and produced the Task 1 analysis with insights, recommendations and a documented GitHub repository. The portal submission and final steps are planned for the coming weeks, and this report will be updated when the internship ends on 27/11/2026.

12. Future Scope

- Apply for the Internship Completion Certificate and Letter of Recommendation after submission, subject to Future Interns' eligibility criteria.
- Use Python and Excel alongside Power BI for deeper analysis.
- Publish periodic LinkedIn updates and keep building a GitHub portfolio.
